

Your story, in your words.

A quiet place to talk, type, read, listen, and print. Your books and recordings stay on the device where you write.

MAKE YOURSELF AT HOME

Open the address Addam gave you and sign in with your approved email. On Windows, use Chrome or Edge. On iPhone, use Safari. Keep using the same browser or installed Ghostwriter icon to find your books.

From a memory to a page

- 1 Choose **Start my book** and add your name and title. Returning? Your last book opens for you.
- 2 Choose **Talk**, then **Start private dictation**. Allow the microphone. Or choose **Type instead**.
- 3 Keep Ghostwriter open while recording. Choose **I'm finished**, then read and correct the words.
- 4 Choose **Write this into the book**. Wait for **Saved on this device** before closing.
- 5 Choose **Keep draft for later** if you are not finished. Next time, choose **Continue my draft**.
- 6 Use **Read, Listen to the page**, or **Print**. Listening needs an English voice installed on your device.

Install it. Take it offline.

Open **Install Ghostwriter** in the writing room. On Windows, use your browser's install option. On iPhone, choose **Share** → **Add to Home Screen**.

Open the new icon while online. Wait for offline readiness. Choose **Prepare offline dictation**, then try a short recording. The first speech download needs internet; your audio stays here.

Keep a separate copy.

After writing, open **Backups** (or **Keep safe** on a phone). Download a backup or save it to Files. Check that the file is there.

To restore, choose that backup and **Restore these books**. It adds copies without replacing your current books. Use this to move between devices; books do not automatically sync.

If something interrupts you

- **Not saved?** Keep the page open. Download a backup of your latest words, then follow the save message.
- **Recording interrupted?** Reopen your draft. Save the recording and retry turning it into words. Only audio already saved can be recovered.
- **Book missing?** Check the same device, address, browser, and Books list. Avoid private browsing. Do not clear website data or delete the app.
